

## HALTON CATHOLIC DSB SCHOOL BOARD VENTILATION PROFILE

School boards are optimizing air quality in schools through improved ventilation and filtration.

Implemented measures are dependent on the type of ventilation and feasibility within the context of school facilities and related building systems.

This is a key element in the multiple protective strategies being employed to reduce the risk of COVID-19 transmission and support healthier and safe learning environments for students and staff.

## MEASURES TO HELP REDUCE TRANSMISSION RISK IN INDOOR SETTINGS

Ventilation: Increasing the flow of outdoor/fresh air for diluting the concentration of any infectious particles.

Filtration: Involves the use of different types of fibrous media designed to remove particles from the airstream.

## **SCHOOL BOARD VENTILATION STRATEGY**

- > Continue best practice maintenance with a focus on equipment that impacts indoor air quality and increase air filtration to MERV 13, where possible.
- ➤ Increase outside air flow to occupied space where possible and run ventilation systems 2 hours before and after occupancy to flush buildings daily.
- > Rebalance HVAC systems to maximize ventilation air into occupied spaces.
- > Use Portable HEPA air cleaners in high risk areas identified by the Ministry of Education.
